

Earth Day 2016 - 17

KG. Section – Morning Shift

Of all the eight planets of the Solar System, Earth is the only planet that supports life with incredible biodiversity. It is our duty to protect its natural resources and keep its beauty intact. Earth day is most widely celebrated on 22nd April every year.

The UKG classes of KG. Sec. morning shift celebrated Earth day on April 21st, Thursday. The day was well planned by teachers who gave a talk on the significance of the day. Students were shown documentaries to give them the insight into the issues that are leading to the planets slow degeneration and destruction.

A poster colouring activity was held for the students. They were explained what measures must be taken by them to save the earth and the human race. The importance of recycling, planting trees, saving water, proper disposal of garbage were stressed to create a clean and healthy environment. In some classes students learnt how to grow a plant.

With great enthusiasm and fervor the students took a pledge to conserve the nature to save the planet Earth.
